Install Guide
Beams

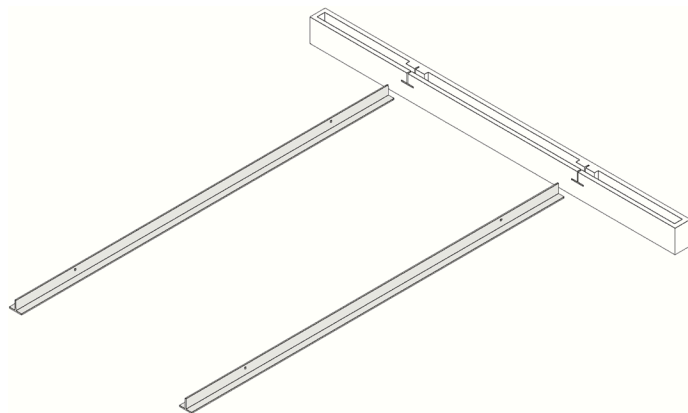

Check the product page

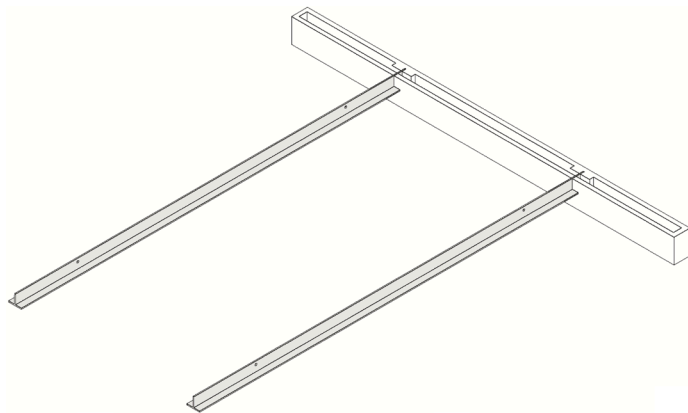

Quiet by design

1. Locate the 'End Cap Beams' (they can be identified by the built-up block on the inside) and the aluminum 'T-track'.

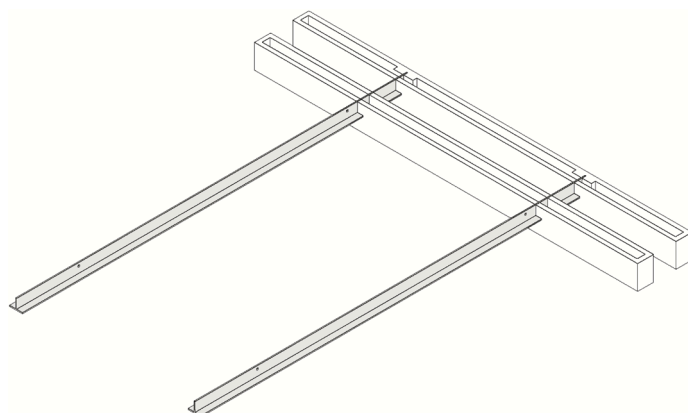

(Note; the top of the baffle will have small holes cut out for the installation hardware).

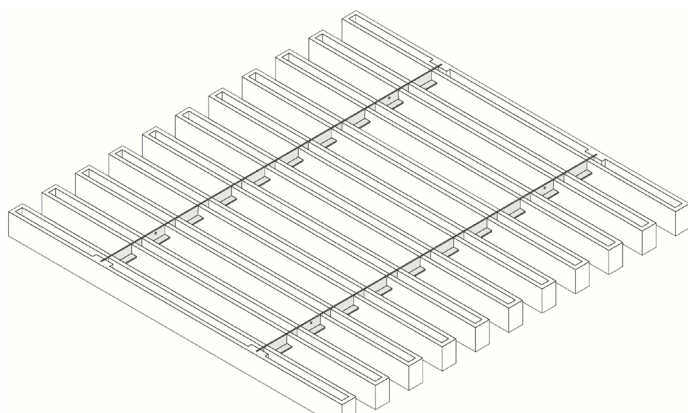

2. Insert the aluminum T-track into the End Cap Beam as shown below:

3. Now slide on the intermediate Beams (in numerical order if noted on the Beams), spacing the Beams using spacing tool provided.

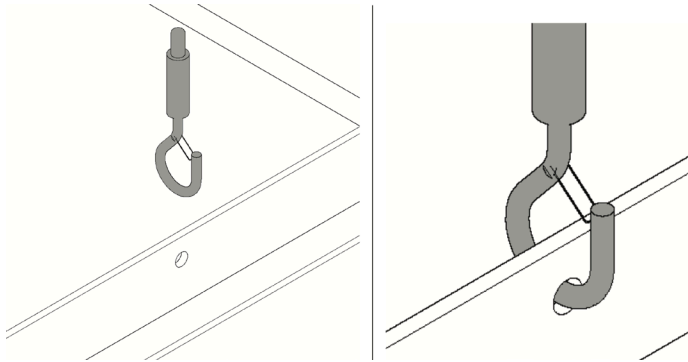

4. Add remaining Beams, ending with a Beam End Cap.

- 5. Next, attach the 'Clevis-Hook' onto the T-track in the pre-drilled holes.**

(Ensure that the spring-loaded safety clip is in the closed position once the hardware is attached).

- 6. When all Clevis-Hooks have been installed, your Linear Beam is now complete and ready to be suspended from the ceiling.**

(Please refer to the 'Ceiling Hardware Install Guide' for the final steps).
